Game Camera Report Card

1. Average Native Outdoors Retail Price
2. Battery life can be measured in time or number of pictures. We prefer # of pictures because traffic patterns can differ in different locations.
3. Trigger Speed is measured in seconds, from the time the camera senses motion until it actually takes the picture.
4. Flash is measured in feet and is the furthest distance from the camera that still has enough light to make out a deer's antlers.
5. Detection zone is a combination of the area that is covered and the sensitivity of the PIR sensor. more pictures means a higher ranking.
6. How easy the camera is to set up and taking pictures.
